Case Study

(7)

Ben aged 62, has recently been diagnosed with Type 2 diabetes. He complains of extreme fatigue. He fell asleep while driving and was so worried for her situation that he consulted the doctor also. The doctor recommended that he should reduce his weight. Ben has therefore decreased his fat intake a lot and eats lots of grains, refined carbohydrates and some protein. Two weeks later his problems are still there. He still feels fatigued and lethargic most of the time. He visits a dentition. Through testing, it is discovered that Ben is gluten intolerant.

- i. Which of the followings do you think is the right dietary advice for Ben?
 - a) Ben should stop eating grains altogether and should use vegetables as his sources of carbohydrates
 - b) Ben should eat lots of grains as these are good for diabetics.
 - c) He should eat all the foods with low GI.
- ii. Do you think that Ben should be advised to replace all his refined foods with whole foods?
 - a) yes
 - b))no
- iii. How can Ben be advised on his fat intake?
 - a) he should include healthy fats in his diet
 - b) he should stop taking any fats in his diet at all.
 - c) He should continue his present fat intake.
