

Assessment 1

Total Marks: 30

1. Do all children develop various skills and abilities at the same time? If not, why? (8)
2. Define 'Cognitive development'. (8)
3. What are the five stages of development in children according to Erikson's theory of psychological development? (8)

Activity 1

Think of two children that you know. List three ways that they tend to be different from one another in the way they respond to situations (for example, in the way they interact with people they haven't met before, the way they deal with stress, their activity levels). (6)
