Q.2. Short Questions:

- i. 'Motivation is one of the most important factors in weight loss'. Discuss.
- ii. 'Setting goals is very important in weight loss programmes'. Why?
- iii. Once a person has lost weight, how can they maintain it long-term?

- iv. How important it is to know the total calorie intake required for a person before devising any weight loss plan for them?
- v. 'Extra weight speeds up the metabolism'. Discuss.
- vi. Design a weight loss programme.

Case study**(7)**

Brandon is 32 year old man. He thinks that he is overweight, and should lose some weight. He is not very active and does not take any exercise at present. He is 6 ft 3 inches tall (191 cm) and his weight is 140 kg (309 IB).

- 1) Calculate Brandon's BMI.
- 2) Design a weight loss programme for Brandon, so that Brandon could reduce 0.5 kg or 1pound a week. According to this programme, he should be taking 300 less calories a day than his body requirement, and he should further burn 200 calories through physical activity. The programme should be based on a balanced diet.
